Model certificate template for Category 3: Cats and Dogs from Rabies Absent or Well-Controlled Countries

Each page of the veterinary certificate must be signed, stamped, dated, and identified with a unique certificate reference number

Part 1: Consignment information

1. Consignor (Exporter): Name: Address:	2. Certificate reference number:
	3. Competent Authority:
4. Consignee (Importer): Name: Address:	5. Country of origin: ISO Code*:
	6. Country of destination: NEW ZEALAND ISO Code: NZL
7. Scheduled date of departure:	8. Port of departure:
9. Place of origin: Name: Address:	10. Means of transport: ☐ Aeroplane ☐ Ship Identification:
11. Port of arrival:	12. Import permit number:
13. Total number of animals:	14. Country of transit/transhipment (if applicable):

15. Identification of commodity: Cats (*Felis catus*), Dogs (Canis *familiaris*) and/or hybrid cats and dogs

Name	Species	Breed	Microchip Number	Microchip Location	DOB	Sex	Desexed or Entire

Signature, date and stamp of official government veterinarian

Part 2: Official Certificate

Exporting Country:	**Certificate reference number:**

The Competent Authority of the exporting country is required to issue a signed, stamped and dated veterinary certificate attesting the following:

The undersigned official veterinarian certifies that the animals described above satisfy the following requirements:

Specified requirements (*delete as appropriate)

1. After due enquiry and inspection, I am satisfied that the cat or dog:
   a) Is a domestic cat (*Felis catus*) or a hybrid (offspring of a cat, (*Felis catus*) crossed with a wild species); or.
   b) Is a domestic dog (*Canis familiaris*) or a hybrid (offspring of a dog, *Canis familiaris* crossed with a wild species)
   c) Will not be more than 42 days pregnant on the date of shipment, or arrival in New Zealand if travelling by sea.
   d) Will be free from all quarantine restrictions before shipment.

Testing, vaccines and treatments

2. The cat or dog is permanently and uniquely identified with a microchip that was scanned by a veterinarian before shipment to confirm the microchip number in the identification table above.
3. The microchip number of the cat or dog was verified and recorded by a veterinarian at each examination, test, vaccination and/or treatment required for import into New Zealand.
4. The microchip number of the cat or dog is correctly recorded on all vaccination and treatment records, laboratory results and certification.
5. All pre-export testing required by the *Import Health Standard: Cats and Dogs (IHS)* was conducted at:
   a) A laboratory approved by the Competent Authority of a category 1, 2 or 3 country; or
   b) The National Animal Health Laboratory in New Zealand; or
   c) A laboratory in a category 1, 2 or 3 country approved by the EU Commission for rabies testing; or
   d) A WOAH rabies reference laboratory in a category 1, 2 or 3 country.
6. All laboratory samples were collected, processed, and stored in a category 1, 2 or 3 country (or New Zealand) in accordance with the recommendations in the *Code* and/or the *Manual* or as described in *MPI-STD-SAA.*
7. All diagnostic test(s), treatment(s) and vaccines that are required to be used or undertaken by the *IHS* are those that have been approved by MPI for that purpose and documented in *MPI-STD-SAA*.
8. All products and vaccinations required by the *IHS* were administered:
   a) To meet the specific disease requirements in Part 2: Specified requirements for identified risk organisms; and
   b) As per the manufacturer's instructions; and
   c) In a category 1, 2 or 3 country (or New Zealand).
9. All requirements in the *IHS* for the administration of a vaccine entail that either:
   a) The final dose of a primary vaccination course was administered; or
   b) The recommended booster to complement the primary course was administered.
10. Where products required by the *IHS* have been administered, the product name, manufacturer, active ingredients (where applicable), and the dose and date of the treatment is recorded on the veterinary certificate (where specified).

Documentation (*delete as appropriate)

11. All documentation and declarations required to accompany the cat or dog are:
    a) Original (unless stated otherwise).
    b) In English or translated into English and is clear and legible.
    c) Identified with a microchip number for each cat or dog, consistent with this veterinary certificate.
12. Documentation that is in a paper format is, unless otherwise stated in the *IHS*, endorsed on every page by the official veterinarian with their original stamp, signature and date or endorsed in the space allocated and all pages have paper-based alternative security features.
13. Documentation that is in an electronic format will be, unless otherwise stated by MPI, transmitted directly from the Competent Authority of the exporting country to MPI, using an electronic system approved by MPI for that purpose.
14. Laboratory reports (endorsed copies acceptable) include the following:
    a) Microchip number of the cat or dog.
    b) Dates of sample collection and receipt at the laboratory.

Signature, date and stamp of official government veterinarian

Exporting Country:	Certificate reference number:

c) Test type.
d) Test result.
e) Date(s) rabies vaccination(s) given.
f) Name of vaccine(s).
g) Date vaccination(s) is valid to (as per the manufacturer's instructions).
h) Veterinarian's name, signature and associated veterinary clinic.

15. The following documents accompany this veterinary certificate (endorsed copies acceptable):
    a) Import permit.
    b) Laboratory reports (as applicable)*.
    c) Desexing certificate or *Brucella canis* declaration (as applicable).*
    d) Rabies vaccination record(s).
    e) For a New Zealand-origin cat or dog: Veterinary (Export) certificate or Animal Welfare Export Certificate (AWEC) used to export the cat or dog from New Zealand.*
    f) *Babesia rossi* residency declaration.*
    g) Canine influenza declaration.*
16. Rabies vaccination records include the following:
    a) Microchip number of the cat or dog.
    b) Date(s) rabies vaccinations given.
    c) Name of vaccine(s).
    d) Veterinarian's name, signature and associated veterinary clinic.

Inspection (*delete as appropriate)

17. The cat or dog was inspected by a veterinarian in the 2 days before the date of shipment and found to be:
    a) Healthy and fit to travel.
    b) Free from visible signs of external parasites, dirt, insects and seeds.
    c) Free from clinical signs of infectious or contagious disease that may be caused by any of the identified risk organisms in the *IHS*.
    d) Free from evidence of recent dog bites (for a dog only).
    e) If the dog is an entire male or female, it was subjected to an examination of the external genitalia (which in the case of a male dog included examination of the extruded penis).*

Transport (*delete as appropriate)

18. In the case of transport by air:*
    a) The transport facilities and arrangements meet the relevant requirements published in the *IATA Live Animal Regulations*.

For rabies (*delete as appropriate)

19. The cat or dog was identifiable by microchip and the number verified and recorded at the time of both vaccination and sample collection for the fluorescent antibody virus neutralisation (FAVN) or rapid fluorescent focus inhibition test (RFFIT) rabies neutralising antibody titration test (RNATT).
20. The cat or dog was vaccinated or revaccinated by a veterinarian when the animal was at least 12 weeks of age, in accordance with the recommendations of the manufacturer, with a government-approved inactivated virus vaccine or recombinant vaccine expressing the rabies virus glycoprotein. The vaccination(s) will remain continuously valid until the scheduled date of shipment. In the case of a primary vaccination, the vaccine was given not less than 6 months before the date of shipment.
    Date of vaccination:
    Duration of immunity of vaccine:
    Date of previous vaccination (if applicable):
    Duration of immunity of previous vaccine (if applicable):
21. The cat or dog was subjected to a FAVN or RFFIT rabies neutralising antibody titration test (RNATT) on a blood sample taken by a veterinarian not less than 3 months and not more than 12 months before the date of shipment with a result of at least 0.5 IU/mL. Test used:

    Sample collection date(s):
    Test Result:
22. The rabies neutralising antibody titration test (RNATT) sample was taken between 6 and 12 months prior to shipment and the cat or dog had its microchip scanned by an official veterinarian in a categorised country before the sample for the RNATT was taken; or
    a) The sample was taken at least 3 months and less than 6 months prior to shipment and the cat or dog had its microchip scanned twice by an official veterinarian in a categorised country:
        i) The first scan was done at least 6 months prior to shipment:
        Date of first scan:

Signature, date and stamp of official government veterinarian

Exporting Country:	Certificate reference number:

ii) The second scan was done in the country of export before the sample for the RNATT was taken.
Date of second scan:

For a New-Zealand origin cat or dog returning from a category 3 country (overseas for more than 30 days)*

23. The cat or dog meets the regular rabies requirements as specified above;* or
24. The cat or dog was identifiable by microchip and the number verified and recorded at the time of both vaccination, and sample collection for the FAVN or RFFIT rabies neutralising antibody titration test (RNATT).*
25. After due enquiry and inspection of provided documentation, I am satisfied to the best of my knowledge that the cat or dog was vaccinated or revaccinated by a veterinarian before export from New Zealand when the animal was at least 12 weeks of age, in accordance with the recommendations of the manufacturer with a rabies virus vaccine listed in MPI-STD-SAA. The vaccination will remain continuously valid between the dates of export from and the scheduled date of shipment back to New Zealand.*
    Date of vaccination: ……
    Duration of immunity of vaccine: ……
    Date of previous vaccination (if applicable): ……
    Duration of immunity of previous vaccine (if applicable): ……
    Date of export from New Zealand: ……
26. After due enquiry and inspection of provided documentation, I am satisfied to the best of my knowledge that the cat or dog was subjected to a FAVN or RFFIT rabies neutralising antibody titration test (RNATT) on a blood sample taken by a veterinarian before export from New Zealand and in the 12 months before the date of shipment back to New Zealand; with a result of at least 0.5 IU/mL. The rabies neutralising antibody titre test (RNATT) will remain continuously valid between the dates of export from New Zealand to the scheduled date of shipment back to New Zealand.*
    Test used: ……
    Sample collection date(s): ……
    Test Result: ……

For external parasites (*delete as appropriate)

27. The **cat** was treated by a veterinarian with a product listed in *MPI-STD-SAA* for the control of ticks and fleas at the manufacturer's recommended dose.*
    a) The treatment was given in the 16 days before the date of shipment.
    b) The cat will have continuous protection (as per the manufacturer's directions) from ticks and fleas from the date of treatment to the date of shipment.
    c) The cat was free from visible signs of external parasites at the time of this treatment.
    Treatment/inspection date:
    Product name:
    Active ingredient(s):
    Weight of cat at time of treatment (kg):
    Dose given:
28. The **dog** was treated at least twice by a veterinarian with a product listed in *MPI-STD-SAA* for the control of ticks and fleas at the manufacturer's recommended dose:*
    a) The first treatment was given at least 14 days before the date the blood sample was taken for the *Babesia gibsoni*, and *Babesia rossi* test (if applicable).
    First treatment/inspection date:
    Product name:
    Active ingredient(s):
    Weight of dog at time of treatments (kg):
    Dose given:
    b) The last treatment was given in the 16 days before the date of shipment.
    Second treatment/inspection date:
    Product name:
    Active ingredient(s):
    Dose given:
    c) An additional external parasite treatment (*if required for continuous protection).
    Additional treatment/inspection date:
    Product name:
    Active ingredient(s):
    Dose given:
    d) The dog will have continuous protection (as per the manufacturer's directions) from ticks and fleas from the date of the first treatment to the date of shipment.
    e) The dog was free from visible signs of external parasites at the time of each treatment.

Signature, date and stamp of official government veterinarian

Exporting Country:	**Certificate reference number:**

For internal parasites

29. The cat or dog was treated twice by a veterinarian with a product (or combination of products) listed in *MPI-STD-SAA* for the control of nematodes and cestodes (including *Echinococcus* spp.) at the manufacturer's recommended dose:
    a) The first treatment was given in the 30 days before the date of shipment and at least 14 days before the second treatment. First treatment date:
       Product name(s):
       Active ingredient(s):
       Weight of animal at time of treatment (kg):
       Dose given:
    b) The second treatment was given in the 5 days before the date of shipment.
       Second treatment date:
       Product name(s):
       Active ingredient(s):
       Weight of animal at time of treatment (kg):
       Dose given:

For *Angiostrongylus vasorum* (dogs only)* (*delete as appropriate)

30. The dog was treated by a veterinarian with one of the following products or combination of products in the 5 days before the date of shipment:*
    a) Spinosad (45-70 mg/kg) and milbemycin oxime (0.75-1.18 mg/kg)
    b) Afoxolaner (2.5 mg/kg) and milbemycin oxime (0.5 mg/kg)
    c) Moxidectin (2.5 mg/kg)
    d) Moxidectin (2.5 mg/kg) + imidacloprid (0.1 ml/kg of 2.5% topical spot on)
       Date of treatment:
       Treatment used:
       Weight of dog at time of treatment (kg):
       Dose given:

For heartworm (*Dirofilaria immitis*) (dogs only)* (*delete as appropriate)

31. If 7 months of age or older on the date of shipment, the dog was subjected to a heartworm antigen enzyme-linked immunosorbent assay (ELISA) test with a negative result on a sample taken in the 30 days before the date of shipment.*
    Sample collection date:
32. The dog was either:
    a) Treated by a veterinarian with one of the following products in the 5 days before the date of shipment;* or
       i) Ivermectin at 6 mcg/kg
       ii) Milbemycin at 0.5 mg/kg
       iii) Moxidectin at 2-4 mcg/kg
       iv) Selamectin at 6 mg/kg
       Date of treatment:
       Treatment used:
       Weight of dog at time of treatment (kg):
       Total dose:
    b) Up to date with a sustained-release injection of moxidectin for heartworm prevention administered by a veterinarian.*
       Date of treatment: .....
       Product name: .....
       Weight of dog at time of treatment (kg): .....
       Total dose: .....

For *Babesia rossi* (dogs only) (*delete as appropriate)

33. Based on a written declaration from the owner, has the dog ever resided in or travelled to mainland Africa?
    ☐ Yes
    ☐ No
    ☐ Unknown

If **yes** or unknown:

34. The dog was treated by a veterinarian with a single dose of imidocarb dipropionate at a rate of 7.5 mg/kg body weight in the 16 days before the date of shipment;* or
    Date of treatment: .....
    Weight of dog at time of treatment (kg): .....
    Total dose: .....

Signature, date and stamp of official government veterinarian

Exporting Country:	**Certificate reference number:**

35. The dog was treated by a veterinarian with 2 doses of imidocarb dipropionate at a rate of 6.0 mg/kg bodyweight given at least 14 days apart, with the last treatment in the 16 days before the date of shipment;* or

    First treatment date: ……

    Total dose given for first treatment: ……

    Second treatment date: ……

    Total dose given for second treatment: ……

    Weight of dog at time of treatments (kg): ……

36. For a dog that was 6 months of age or older at the time of sampling: The dog was subjected to an indirect fluorescent antibody test (IFA) or enzyme-linked immunosorbent assay (ELISA) test for *Babesia rossi* AND a PCR test for *Babesia rossi* with negative results on samples taken at least 14 days after the first external parasite treatment and in the 30 days before the date of shipment;* or

    First external parasite treatment date: ……

    IFA/ELISA test sample collection date: ……

    PCR test sample collection date: ……

    Test used (IFA or ELISA): ……

    a) The dog was subjected to 3 PCR tests at intervals of at least 7 days for *Babesia* spp, or *Babesia rossi* with negative results, with the first sample taken at least 14 days after the first external parasite treatment and in the 44 days before shipment.* First external parasite treatment date: ……

    First sample collection date: ……

    Second sample collection date: ……

    Third sample collection date: ……

37. For a dog that was under 6 months of age at the time of sampling: The dog was subjected to 3 PCR tests at intervals of at least 7 days for *Babesia rossi* with negative results, with the first sample taken at least 14 days after the first external parasite treatment and in the 44 days before shipment.*

    First external parasite treatment date: ……

    First sample collection date: ……

    Second sample collection date: ……

    Third sample collection date: ……

For *Babesia gibsoni* (dogs only) (*delete as appropriate)

38. For a dog that was 6 months of age or older at the time of sampling:

    a) The dog was subjected to an indirect fluorescent antibody test (IFA) or enzyme-linked immunosorbent assay (ELISA) test for *Babesia gibsoni* **AND** a PCR test for *Babesia gibsoni* with negative results on samples taken at least 14 days after the first external parasite treatment and in the 30 days before the date of shipment;*

    First external parasite treatment date:

    IFA/ELISA test sample collection date:

    Test used (IFA or ELISA):

    PCR test sample collection date:

    Or

    b) The dog was subjected to 3 PCR tests at intervals of at least 7 days for *Babesia gibsoni* with negative results, with the first sample taken at least 14 days after the first external parasite treatment and in the 44 days before shipment.*

    First external parasite treatment date: ……

    First sample collection date: ……

    Second sample collection date: ……

    Third sample collection date: ……

39. For a dog that was under 6 months of age at the time of sampling: The dog was subjected to 3 PCR tests at intervals of at least 7 days for *Babesia gibsoni* with negative results, with the first sample taken at least 14 days after the first external parasite treatment and in the 44 days before shipment.

    First external parasite treatment date: ……

    First sample collection date: ……

    Second sample collection date: ……

    Third sample collection date: ……

Note: A dog diagnosed with *Babesia gibsoni* or *Babesia conradae* is not eligible for import, regardless of treatment.

For *Brucella canis* (dogs only) (*delete as appropriate)

40. A record signed by a veterinarian, confirms that the dog has been desexed;* or
41. The dog originates from a country of export that is free from *Brucella canis* as recognised by MPI;* or
42. A written declaration accompanies this certificate that states that the entire dog (male or female) was not bred (naturally or artificially) between the 30 days prior to the sample collection for the *Brucella canis* test and the date of shipment; and

Signature, date and stamp of official government veterinarian

Exporting Country:	**Certificate reference number:**

a) The entire dog (male or female) was subjected to either a rapid slide agglutination test (RSAT), a tube agglutination test (TAT), or an indirect fluorescent antibody test (IFA) for *Brucella canis* with a negative result on a sample taken in the 30 days before the date of shipment;*

Test used:

Sample collection date:

or

i) the entire dog (male or female) had a positive or inconclusive RSAT or TAT and has been subjected to cytoplasmic agar gel immunodiffusion test (CPAg-AGID), RSAT or TAT for *Brucella canis* with negative result on a sample taken in the 30 to 40 days after the first test and in the 30 days before the date of shipment

Test used: ……

Sample collection date: ……

43. The entire dog (male or female) was bred (naturally or artificially) in the 30 days prior to the blood sampling for the *Brucella canis* test, and was subjected to either a rapid slide agglutination test (RSAT), a tube agglutination test (TAT), or an indirect fluorescent antibody test (IFA) for *Brucella canis* with a negative result on a sample taken in the 21 days before the date of shipment;*

Test used: ……

Sample collection date: ……

or

i) the dog (male only) had a positive or inconclusive RSAT or TAT result and has been subjected to CPAg-AGID, RSAT or TAT for *Brucella canis* with negative result on a sample taken in the 30 to 40 days after the first test and in the 21 days before the date of shipment;;

Test used: ……

Sample collection date: ……

and

a) The dog (male or female) that naturally mated the dog for export, or the dog that produced the semen for artificial breeding, was subjected to a rapid slide agglutination test (RSAT), a tube agglutination test (TAT) or an indirect fluorescent antibody virus neutralisation test (IFA) with a negative result on a blood sample taken in the 21 days before the date of mating/insemination; or

Test used: ……

Sample collection date: ……

or

b) A sample of the semen used to breed the dog for export was subjected to a polymerase chain reaction (PCR) test for *Brucella canis* with a negative result;

Sample collection date: ……

For canine influenza (*delete as appropriate)

44. For a dog from countries that present a risk as listed in MPI-STD-SAA:*

a) Either the dog was fully vaccinated between 12 months and 14 days before the date of shipment with a registered monovalent or bivalent inactivated vaccine containing either or both canine influence virus subtypes CIV H3N8 and/or CIV H3N2;

i) The vaccine is effective against the strains of virus circulating in the area the dog resided in before shipment; and

ii) The vaccination will remain valid for the entire post-arrival quarantine period;*Date of vaccination(s):

Name of vaccine:

Duration of immunity of vaccine:

Or

b) The dog was subjected to a polymerase chain reaction (PCR) test for CIV H3N8 and H3N2 viral antigens with a negative result on a sample collected in the 10 days before the date of shipment.*

Sample collection date:

45.

A **cat** or **dog**: Based on a written declaration from the owner, for at least 21 days before the date of shipment:

a) The **cat** or **dog** was not kept in a place where there were cats or dogs showing clinical signs of infectious respiratory disease; and

b) The **cat** or **dog** has not shown clinical signs of infectious respiratory disease

Signature, date and stamp of official government veterinarian

Exporting Country:	**Certificate reference number:**

For leishmaniosis (dogs only) (*delete as appropriate)

46. There have been no endemic cases of leishmaniasis caused by *Leishmania infantum* in this country; and
    a) The dog has been continuously resident in this country of export since birth, or since it was imported from New Zealand; or
47. The dog has not shown any clinical signs of leishmaniasis in the 2 days before the date of shipment; and
    a) The dog was subjected to indirect fluorescent antibody (IFA) test, or enzyme-linked immunosorbent assay (ELISA) test for *Leishmania infantum*, with negative results on a sample taken in the 30 days before the date of shipment as listed in the MPI-STD-SAA *; and
    b) For dogs vaccinated with a serology-interfering vaccine, the vaccination will remain continuously valid until shipment and proof of vaccination accompanies the dog (as applicable)*.

    Test used:

    Sample collection date:

    or

    c) The dog vaccinated with a serology-interfering *Leishmania infantum* vaccine was subjected to a PCR test on a buffy coat or conjunctival sample with negative results within 30 days prior to the date of shipment; and*

    Test used: ……

    Sample collection date: ……

    d) the vaccination will remain continuously valid until shipment and proof of vaccination accompanies the dog (as applicable). or

    e) The unvaccinated dog was subjected to an IFA or ELISA test, with negative results on a sample collected within 30 days prior to the date of shipment*.

    Test used: ……

    Sample collection date: ……

Note: A dog diagnosed with *Leishmania infantum* is not eligible for import, regardless of treatment.

For leptospirosis (*Leptospira interrogans* serovar Canicola) (dogs only) (*delete as appropriate)

48. The exporting country is free from *Leptospira interrogans* serovar Canicola as recognised and agreed by MPI, and listed in MPI-STD-SAA; or
49. The dog has been subjected to a (MAT) microscopic agglutination test for *Leptospira interrogans* serovar Canicola with a negative result.*

    Sample collection date:
50. The dog had a positive MAT between 1:100 and 1:400 for L. Canicola in the 30 days prior to the date of shipment; and either the dog
    a) is vaccinated against L. Canicola, and the vaccination will remain continuously valid until shipment and the proof of vaccination accompanies the dog or
    b) has been subjected to a second MAT for L. Canicola at least 14 days after the first test and showed no increase above the titre of the first test:

    First sample collection date: ……

    Second sample collection date: ……
51. The dog was treated with a therapeutic course of doxycycline for 14 consecutive days in the 30 days before the date of shipment.*

    First date of treatment: ……

    Last date of treatment: ……

    Weight of dog at time of treatment (kg): ……

    Daily dose given: ……
